

Techniques Used by Lazarus Group

Domain	ID	Name	Use	Column1
Enterprise	<a href="#">T1134</a>	<a href="#">.002</a>	Access Token Manipulation: Create Process with Token	Lazarus Group keylogger KiloAlfa obtains user tokens from interactive sessions to execute itself with API call <code>CreateProcessAsUserA</code> under that user's context.[3][8]
Enterprise	<a href="#">T1087</a>	<a href="#">.002</a>	Account Discovery: Domain Account	Lazarus Group has queried an active directory server to obtain the list of accounts, including administrator accounts.[9]
Enterprise	<a href="#">T1098</a>		<a href="#">Account Manipulation</a>	Lazarus Group malware WhiskeyDelta-Two contains a function that attempts to rename the administrator's account.[3][10]
Enterprise	<a href="#">T1583</a>	<a href="#">.001</a>	Acquire Infrastructure: Domains	Lazarus Group has acquired domains related to their campaigns to act as distribution points and C2 channels.[11][9][12]
		<a href="#">.004</a>	Acquire Infrastructure: Server	Lazarus Group has acquired servers to host their malicious tools.[9]
		<a href="#">.006</a>	Acquire Infrastructure: Web Services	Lazarus Group has hosted malicious downloads on Github and Dropbox.[11][13]
Enterprise	<a href="#">T1557</a>	<a href="#">.001</a>	Adversary-in-the-Middle: LLMNR/NBT-NS Poisoning and SMB Relay	Lazarus Group executed <a href="#">Responder</a> using the command <code>[Responder file path] -i [IP address] -rPv</code> on a compromised host to harvest credentials and move laterally.[14]
Enterprise	<a href="#">T1071</a>	<a href="#">.001</a>	Application Layer Protocol: Web Protocols	Lazarus Group has conducted C2 over HTTP and HTTPS.[15][16][17][18][19][20][21]
Enterprise	<a href="#">T1010</a>		<a href="#">Application Window Discovery</a>	Lazarus Group malware IndiaIndia obtains and sends to its C2 server the title of the window for each running process. The KiloAlfa keylogger also reports the title of the window in the foreground.[3][22][8]
Enterprise	<a href="#">T1560</a>		<a href="#">Archive Collected Data</a>	Lazarus Group has compressed exfiltrated data with RAR and used RomeoDelta malware to archive specified directories in .zip format, encrypt the .zip file, and upload it to C2. [22][23][15][9]
		<a href="#">.002</a>	<a href="#">Archive via Library</a>	Lazarus Group malware IndiaIndia saves information gathered about the victim to a file that is compressed with Zlib, encrypted, and uploaded to a C2 server.[23][15]
		<a href="#">.003</a>	<a href="#">Archive via Custom Method</a>	A Lazarus Group malware sample encrypts data using a simple byte based XOR operation prior to exfiltration.[3][22][23][15]
Enterprise	<a href="#">T1547</a>	<a href="#">.001</a>	Boot or Logon Autostart Execution: Registry Run Keys / Startup Folder	Lazarus Group has maintained persistence by loading malicious code into a startup folder or by adding a Registry Run key.[3][23][15][18][19]
		<a href="#">.009</a>	Boot or Logon Autostart Execution: Shortcut Modification	Lazarus Group malware has maintained persistence on a system by creating a LNK shortcut in the user's Startup folder.[15][13]
Enterprise	<a href="#">T1110</a>		<a href="#">Brute Force</a>	Lazarus Group has performed brute force attacks against administrator accounts.[9]
		<a href="#">.003</a>	<a href="#">Password Spraying</a>	Lazarus Group malware attempts to connect to Windows shares for lateral movement by using a generated list of usernames, which center around permutations of the username Administrator, and weak passwords.[3][23]
Enterprise	<a href="#">T1059</a>	<a href="#">.001</a>	Command and Scripting Interpreter: PowerShell	Lazarus Group has used PowerShell to execute commands and malicious code.[9][12]
		<a href="#">.003</a>	Command and Scripting Interpreter: Windows Command Shell	Lazarus Group malware uses <code>cmd.exe</code> to execute commands on a compromised host.[3][10][15][24][20] A Destover-like variant used by Lazarus Group uses a batch file mechanism to delete its binaries from the system.[25]
		<a href="#">.005</a>	Command and Scripting Interpreter: Visual Basic	Lazarus Group has used VBA and embedded macros in Word documents to execute malicious code.[18][13][19][20]
Enterprise	<a href="#">T1584</a>	<a href="#">.001</a>	Compromise Infrastructure: Domains	Lazarus Group has compromised legitimate domains, including those hosted in the US and Italy, for C2.[26]
		<a href="#">.004</a>	Compromise Infrastructure: Server	Lazarus Group has compromised servers to stage malicious tools.[14][13][9][18]
Enterprise	<a href="#">T1543</a>	<a href="#">.003</a>	Create or Modify System Process: Windows Service	Several Lazarus Group malware families install themselves as new services.[3][10]
Enterprise	<a href="#">T1485</a>		<a href="#">Data Destruction</a>	Lazarus Group has used a custom secure delete function to overwrite file contents with data from heap memory.[3]
Enterprise	<a href="#">T1132</a>	<a href="#">.001</a>	Data Encoding: Standard Encoding	A Lazarus Group malware sample encodes data with base64.[15]
Enterprise	<a href="#">T1005</a>		<a href="#">Data from Local System</a>	Lazarus Group has collected data and files from compromised networks.[3][22][23][14][13][18]
Enterprise	<a href="#">T1001</a>	<a href="#">.003</a>	Data Obfuscation: Protocol Impersonation	Lazarus Group malware also uses a unique form of communication encryption known as FakeTLS that mimics TLS but uses a different encryption method, potentially evading SSL traffic inspection/decryption.[3][10][15][25]
Enterprise	<a href="#">T1074</a>	<a href="#">.001</a>	Data Staged: Local Data Staging	Lazarus Group malware IndiaIndia saves information gathered about the victim to a file that is saved in the %TEMP% directory, then compressed, encrypted, and uploaded to a C2 server.[3][22]
Enterprise	<a href="#">T1491</a>	<a href="#">.001</a>	Defacement: Internal Defacement	Lazarus Group replaced the background wallpaper of systems with a threatening image after rendering the system unbootable with a <a href="#">Disk Structure Wipe</a> . [10]
Enterprise	<a href="#">T1140</a>		<a href="#">Deobfuscate/Decode Files or Information</a>	Lazarus Group has used shellcode within macros to decrypt and manually map DLLs and shellcode into memory at runtime.[19][20]
Enterprise	<a href="#">T1587</a>	<a href="#">.001</a>	Develop Capabilities: Malware	Lazarus Group has developed custom malware for use in their operations.[11][9][12][13]
Enterprise	<a href="#">T1561</a>	<a href="#">.001</a>	Disk Wipe: Disk Content Wipe	Lazarus Group has used malware like WhiskeyAlfa to overwrite the first 64MB of every drive with a mix of static and random buffers. A similar process is then used to wipe content in logical drives and, finally, attempt to wipe every byte of every sector on every drive. WhiskeyBravo can be used to overwrite the first 4.9MB of physical drives. WhiskeyDelta can overwrite the first 132MB or 1.5MB of each drive with random data from heap memory.[10]
		<a href="#">.002</a>	Disk Wipe: Disk Structure Wipe	Lazarus Group malware SHARPKNOT overwrites and deletes the Master Boot Record (MBR) on the victim's machine and has possessed MBR wiper malware since at least 2009.[24][3]

Enterprise	T1189		<a href="#">Drive-by Compromise</a>	Lazarus Group delivered RATANKBA and other malicious code to victims via a compromised legitimate website.[27][12]
Enterprise	T1573	.001	Encrypted Channel: Symmetric Cryptography	Several Lazarus Group malware families encrypt C2 traffic using custom code that uses XOR with an ADD operation and XOR with a SUB operation. Another Lazarus Group malware sample XORs C2 traffic. Other Lazarus Group malware uses Caracachs encryption to encrypt C2 payloads. Lazarus Group has also used AES to encrypt C2 traffic.[3][10][15][25][18]
Enterprise	T1585	.001	Establish Accounts: Social Media Accounts	Lazarus Group has created new LinkedIn and Twitter accounts to conduct social engineering against potential victims.[13][9][12]
		.002	Establish Accounts: Email Accounts	Lazarus Group has created new email accounts for spearphishing operations.[9][14]
Enterprise	T1048	.003	Exfiltration Over Alternative Protocol: Exfiltration Over Unencrypted Non-C2 Protocol	Lazarus Group malware SierraBravo-Two generates an email message via SMTP containing information about newly infected victims.[3][23]
Enterprise	T1041		<a href="#">Exfiltration Over C2 Channel</a>	Lazarus Group has exfiltrated data and files over a C2 channel through its various tools and malware.[3][22][15][26]
Enterprise	T1567	.002	Exfiltration Over Web Service: Exfiltration to Cloud Storage	Lazarus Group has exfiltrated stolen data to Dropbox using a customized version of dbxcli.[9][13]
Enterprise	T1203		<a href="#">Exploitation for Client Execution</a>	Lazarus Group has exploited Adobe Flash vulnerability CVE-2018-4878 for execution.[28]
Enterprise	T1008		<a href="#">Fallback Channels</a>	Lazarus Group malware SierraAlfa sends data to one of the hard-coded C2 servers chosen at random, and if the transmission fails, chooses a new C2 server to attempt the transmission again.[3][23]
Enterprise	T1083		<a href="#">File and Directory Discovery</a>	Several Lazarus Group malware has conducted word searches on compromised machines to identify specific documents of interest. Lazarus Group malware can use a common function to identify target files by their extension, and some also enumerate files and directories, including a Destover-like variant that lists files and gathers information for all drives.[3][25][13][19][20]
Enterprise	T1589	.002	Gather Victim Identity Information: Email Addresses	Lazarus Group collected email addresses belonging to various departments of a targeted organization which were used in follow-on phishing campaigns.[14]
Enterprise	T1591		<a href="#">Gather Victim Org Information</a>	Lazarus Group has studied publicly available information about a targeted organization to tailor spearphishing efforts against specific departments and/or individuals.[9][13][14]
		.004	<a href="#">Identify Roles</a>	Lazarus Group has targeted specific individuals within an organization with tailored job vacancy announcements.[9][13]
Enterprise	T1564	.001	Hide Artifacts: Hidden Files and Directories	Lazarus Group has used a VBA Macro to set its file attributes to System and Hidden and has named files with a dot prefix to hide them from the Finder application.[15][16][17][19]
Enterprise	T1574	.002	Hijack Execution Flow: DLL Side-Loading	Lazarus Group has replaced win_fw.dll, an internal component that is executed during IDA Pro installation, with a malicious DLL to download and execute a payload.[21]
		.013	Hijack Execution Flow: KernelCallbackTable	Lazarus Group has abused the KernelCallbackTable to hijack process control flow and execute shellcode.[19][20]
Enterprise	T1562	.001	Impair Defenses: Disable or Modify Tools	Lazarus Group malware TangoDelta attempts to terminate various processes associated with McAfee. Additionally, Lazarus Group malware SHARPKNOT disables the Microsoft Windows System Event Notification and Alert services.[3][22][8][24].
		.004	Impair Defenses: Disable or Modify System Firewall	Various Lazarus Group malware modifies the Windows firewall to allow incoming connections or disable it entirely using netsh. [3][22][8]
Enterprise	T1070		<a href="#">Indicator Removal</a>	Lazarus Group has restored malicious KernelCallbackTable code to its original state after the process execution flow has been hijacked.[19]
		.003	<a href="#">Clear Command History</a>	Lazarus Group has routinely deleted log files on a compromised router, including automatic log deletion through the use of the logrotate utility.[14]
		.004	<a href="#">File Deletion</a>	Lazarus Group malware has deleted files in various ways, including "suicide scripts" to delete malware binaries from the victim. Lazarus Group also uses secure file deletion to delete files from the victim.[3][25]
		.006	<a href="#">Timestomp</a>	Several Lazarus Group malware families use timestomping, including modifying the last write timestamp of a specified Registry key to a random date, as well as copying the timestamp for legitimate .exe files (such as calc.exe or mspaint.exe) to its dropped files.[3][10][22][25]
Enterprise	T1202		<a href="#">Indirect Command Execution</a>	Lazarus Group persistence mechanisms have used forfiles.exe to execute .htm files.[20]
Enterprise	T1105		<a href="#">Ingress Tool Transfer</a>	Lazarus Group has downloaded files, malware, and tools from its C2 onto a compromised host.[3][10][22][16][17][13][14][18][9][12][19][20][21]
Enterprise	T1056	.001	Input Capture: Keylogging	Lazarus Group malware KiloAlfa contains keylogging functionality.[3][8]
Enterprise	T1534		<a href="#">Internal Spearphishing</a>	Lazarus Group has conducted internal spearphishing from within a compromised organization.[13]
Enterprise	T1036		<a href="#">Masquerading</a>	Lazarus Group has disguised malicious template files as JPEG files to avoid detection.[18]
		.003	<a href="#">Rename System Utilities</a>	Lazarus Group has renamed system utilities such as wscript.exe and mshta.exe.[20]
		.004	<a href="#">Masquerade Task or Service</a>	Lazarus Group has used a scheduled task named SRCheck to mask the execution of a malicious .dll.[21]
		.005	<a href="#">Match Legitimate Name or Location</a>	Lazarus Group has renamed malicious code to disguise it as Microsoft's narrator and other legitimate files.[29][9][20]
Enterprise	T1104		<a href="#">Multi-Stage Channels</a>	Lazarus Group has used multi-stage malware components that inject later stages into separate processes.[19]
Enterprise	T1106		<a href="#">Native API</a>	Lazarus Group has used the Windows API ObtainUserAgentString to obtain the User-Agent from a compromised host to connect to a C2 server.[18] Lazarus Group has also used various, often lesser known, functions to perform various types of Discovery and Process Injection.[19][20]
Enterprise	T1046		<a href="#">Network Service Discovery</a>	Lazarus Group has used nmap from a router VM to scan ports on systems within the restricted segment of an enterprise network.[14]

Enterprise	<a href="#">T1571</a>	<a href="#">Non-Standard Port</a>	Some <a href="#">Lazarus Group</a> malware uses a list of ordered port numbers to choose a port for C2 traffic, creating port-protocol mismatches. <a href="#">[3][23]</a>
Enterprise	<a href="#">T1027</a>	<a href="#">Obfuscated Files or Information</a>	<a href="#">Lazarus Group</a> has used multiple types of encryption and encoding for their payloads, including AES, Caracachs, RC4, XOR, Base64, and other tricks such as creating aliases in code for <a href="#">Native API</a> function names. <a href="#">[3][22][23][15][17][9][18][26][13][19][20]</a>
	<a href="#">.002</a>	<a href="#">Software Packing</a>	<a href="#">Lazarus Group</a> has used Themida to pack malicious DLLs and other files. <a href="#">[13][26]</a>
	<a href="#">.007</a>	<a href="#">Dynamic API Resolution</a>	<a href="#">Lazarus Group</a> has used a custom hashing method to resolve APIs used in shellcode. <a href="#">[19]</a>
Enterprise	<a href="#">T1588</a>	<a href="#">.002</a> Obtain Capabilities: Tool	<a href="#">Lazarus Group</a> has obtained a variety of tools for their operations, including <a href="#">Responder</a> , PuTTY PSCP, Wake-On-Lan, ChromePass, and dbxcli. <a href="#">[9][13][14]</a>
	<a href="#">.003</a>	Obtain Capabilities: Code Signing Certificates	<a href="#">Lazarus Group</a> has used code signing certificates issued by Sectigo RSA for some of its malware and tools. <a href="#">[9]</a>
	<a href="#">.004</a>	Obtain Capabilities: Digital Certificates	<a href="#">Lazarus Group</a> has obtained SSL certificates for their C2 domains. <a href="#">[11]</a>
Enterprise	<a href="#">T1566</a>	<a href="#">.001</a> Phishing: Spearphishing Attachment	<a href="#">Lazarus Group</a> has targeted victims with spearphishing emails containing malicious Microsoft Word documents. <a href="#">[28][14][18][19][20]</a>
	<a href="#">.002</a>	Phishing: Spearphishing Link	<a href="#">Lazarus Group</a> has sent malicious links to victims via email. <a href="#">[14][13][9]</a>
	<a href="#">.003</a>	Phishing: Spearphishing via Service	<a href="#">Lazarus Group</a> has used social media platforms, including LinkedIn and Twitter, to send spearphishing messages. <a href="#">[12][13][9]</a>
Enterprise	<a href="#">T1542</a>	<a href="#">.003</a> Pre-OS Boot: Bootkit	<a href="#">Lazarus Group</a> malware WhiskeyAlfa-Three modifies sector 0 of the Master Boot Record (MBR) to ensure that the malware will persist even if a victim machine shuts down. <a href="#">[3][10]</a>
Enterprise	<a href="#">T1057</a>	<a href="#">Process Discovery</a>	Several <a href="#">Lazarus Group</a> malware families gather a list of running processes on a victim system and send it to their C2 server. A Destover-like variant used by <a href="#">Lazarus Group</a> also gathers process times. <a href="#">[3][22][15][25][17][19]</a>
Enterprise	<a href="#">T1055</a>	<a href="#">.001</a> Process Injection: Dynamic-link Library Injection	A <a href="#">Lazarus Group</a> malware sample performs reflective DLL injection. <a href="#">[15][19]</a>
Enterprise	<a href="#">T1090</a>	<a href="#">.001</a> Proxy: Internal Proxy	<a href="#">Lazarus Group</a> has used a compromised router to serve as a proxy between a victim network's corporate and restricted segments. <a href="#">[14]</a>
	<a href="#">.002</a>	Proxy: External Proxy	<a href="#">Lazarus Group</a> has used multiple proxies to obfuscate network traffic from victims. <a href="#">[30][17]</a>
Enterprise	<a href="#">T1012</a>	<a href="#">Query Registry</a>	<a href="#">Lazarus Group</a> malware IndiaIndia checks Registry keys within HKCU and HKLM to determine if certain applications are present, including SecureCRT, Terminal Services, RealVNC, TightVNC, UltraVNC, Radmin, mRemote, TeamViewer, FileZilla, pcAnyware, and Remote Desktop. Another <a href="#">Lazarus Group</a> malware sample checks for the presence of the following Registry key: HKKEY_CURRENT_USER\Software\Bitcoin\Bitcoin-Qt. <a href="#">[3][22][15]</a>
Enterprise	<a href="#">T1620</a>	<a href="#">Reflective Code Loading</a>	<a href="#">Lazarus Group</a> has changed memory protection permissions then overwritten in memory DLL function code with shellcode, which was later executed via KernelCallbackTable hijacking. <a href="#">Lazarus Group</a> has also used shellcode within macros to decrypt and manually map DLLs into memory at runtime. <a href="#">[19][20]</a>
Enterprise	<a href="#">T1021</a>	<a href="#">.001</a> Remote Services: Remote Desktop Protocol	<a href="#">Lazarus Group</a> malware SierraCharlie uses RDP for propagation. <a href="#">[3][23]</a>
	<a href="#">.002</a>	Remote Services: SMB/Windows Admin Shares	<a href="#">Lazarus Group</a> malware SierraAlfa accesses the ADMIN\$ share via SMB to conduct lateral movement. <a href="#">[3][23]</a>
	<a href="#">.004</a>	Remote Services: SSH	<a href="#">Lazarus Group</a> used SSH and the PuTTY PSCP utility to gain access to a restricted segment of a compromised network. <a href="#">[14]</a>
Enterprise	<a href="#">T1053</a>	<a href="#">.005</a> Scheduled Task/Job: Scheduled Task	<a href="#">Lazarus Group</a> has used schtasks for persistence including through the periodic execution of a remote XSL script or a dropped VBS payload. <a href="#">[9][20][21]</a>
Enterprise	<a href="#">T1593</a>	<a href="#">.001</a> Search Open Websites/Domains: Social Media	<a href="#">Lazarus Group</a> has used LinkedIn to identify and target specific employees within a chosen organization. <a href="#">[9][13]</a>
Enterprise	<a href="#">T1489</a>	<a href="#">Service Stop</a>	<a href="#">Lazarus Group</a> has stopped the MSExchangeS service to render Exchange contents inaccessible to users. <a href="#">[10]</a>
Enterprise	<a href="#">T1608</a>	<a href="#">.001</a> Stage Capabilities: Upload Malware	<a href="#">Lazarus Group</a> has hosted malicious files on compromised as well as <a href="#">Lazarus Group</a> -controlled servers. <a href="#">[13][9][26]</a>
	<a href="#">.002</a>	Stage Capabilities: Upload Tool	<a href="#">Lazarus Group</a> has hosted custom and open-source tools on compromised as well as <a href="#">Lazarus Group</a> -controlled servers. <a href="#">[9]</a>
Enterprise	<a href="#">T1553</a>	<a href="#">.002</a> Subvert Trust Controls: Code Signing	<a href="#">Lazarus Group</a> has digitally signed malware and utilities to evade detection. <a href="#">[9][19]</a>
Enterprise	<a href="#">T1218</a>	<a href="#">System Binary Proxy Execution</a>	<a href="#">Lazarus Group</a> Ink files used for persistence have abused the Windows Update Client (wuauclt.exe) to execute a malicious DLL. <a href="#">[19][20]</a>
	<a href="#">.005</a>	<a href="#">Mshta</a>	<a href="#">Lazarus Group</a> has used mshta.exe to execute HTML pages downloaded by initial access documents. <a href="#">[19][20]</a>
	<a href="#">.010</a>	<a href="#">Rgsvr32</a>	<a href="#">Lazarus Group</a> has used rgsvr32 to execute custom malware. <a href="#">[9]</a>
	<a href="#">.011</a>	<a href="#">Rundll32</a>	<a href="#">Lazarus Group</a> has used rundll32 to execute malicious payloads on a compromised host. <a href="#">[18][9][21]</a>
Enterprise	<a href="#">T1082</a>	<a href="#">System Information Discovery</a>	Several <a href="#">Lazarus Group</a> malware families collect information on the type and version of the victim OS, as well as the victim computer name and CPU information. A Destover-like variant used by <a href="#">Lazarus Group</a> also collects disk space information and sends it to its C2 server. <a href="#">[3][10][22][15][25][19]</a>
Enterprise	<a href="#">T1614</a>	<a href="#">.001</a> System Location Discovery: System Language Discovery	<a href="#">Lazarus Group</a> has deployed malware designed not to run on computers set to Korean, Japanese, or Chinese in Windows language preferences. <a href="#">[13]</a>
Enterprise	<a href="#">T1016</a>	<a href="#">System Network Configuration Discovery</a>	<a href="#">Lazarus Group</a> malware IndiaIndia obtains and sends to its C2 server information about the first network interface card's configuration, including IP address, gateways, subnet mask, DHCP information, and whether WINS is available. <a href="#">[3][22]</a>
Enterprise	<a href="#">T1049</a>	<a href="#">System Network Connections Discovery</a>	<a href="#">Lazarus Group</a> has used net use to identify and establish a network connection with a remote host. <a href="#">[14]</a>
Enterprise	<a href="#">T1033</a>	<a href="#">System Owner/User Discovery</a>	Various <a href="#">Lazarus Group</a> malware enumerates logged-on users. <a href="#">[3][10][22][23][15][16][19]</a>

Enterprise	<a href="#">T1529</a>	<a href="#">System Shutdown/Reboot</a>	Lazarus Group has rebooted systems after destroying files and wiping the MBR on infected systems.[24]
Enterprise	<a href="#">T1124</a>	<a href="#">System Time Discovery</a>	A Destover-like implant used by Lazarus Group can obtain the current system time and send it to the C2 server.[25]
Enterprise	<a href="#">T1221</a>	<a href="#">Template Injection</a>	Lazarus Group has used DOCX files to retrieve a malicious document template/DOTM file.[13][18]
Enterprise	<a href="#">T1204</a>	<a href="#">.001</a> User Execution: Malicious Link	Lazarus Group has sent spearphishing emails in an attempt to lure users to click on a malicious link.[9][13]
		<a href="#">.002</a> User Execution: Malicious File	Lazarus Group has attempted to get users to launch a malicious Microsoft Word attachment delivered via a spearphishing email.[28][13][14][19][20]
Enterprise	<a href="#">T1078</a>	<a href="#">Valid Accounts</a>	Lazarus Group has used administrator credentials to gain access to restricted network segments.[14]
Enterprise	<a href="#">T1497</a>	<a href="#">.001</a> Virtualization/Sandbox Evasion: System Checks	Lazarus Group has used tools to detect sandbox or VMware services through identifying the presence of a debugger or related services.[13]
Enterprise	<a href="#">T1102</a>	<a href="#">.002</a> Web Service: Bidirectional Communication	Lazarus Group has used GitHub as C2, pulling hosted image payloads then committing command execution output to files in specific directories.[19]
Enterprise	<a href="#">T1047</a>	<a href="#">Windows Management Instrumentation</a>	Lazarus Group has used WMIC for discovery as well as to execute payloads for persistence and lateral movement.[3][23][13][14][20]
Enterprise	<a href="#">T1220</a>	<a href="#">XSL Script Processing</a>	Lazarus Group has used WMIC to execute a remote XSL script to establish persistence.[9]
ICS	<a href="#">T0865</a>	<a href="#">Spearphishing Attachment</a>	Lazarus Group has been observed targeting organizations using spearphishing documents with embedded malicious payloads. [31] Highly targeted spear phishing campaigns have been conducted against a U.S. electric grid company. [32]
